This will not only be good for Linux, but Mac OS X as well, and if we're lucky FreeBSD. Nvidia support FreeBSD, so hopefully it won't be hard to get games to FreeBSD, it's not as big as Linux for end users but for hardcore enthusiasts is a great choice.

for a very solid creativity distro check out AVLinux – way better than the Ubuntu/Unity /Gnome3.x mess

FrankieBagnardi • 6 months ago • parent

Thanks, that's the easiest lamp install I've ever done. What does the caret (^) mean there?

1 / \* • Reply • Share ›

eg0e • 2 months ago • parent

Basically, it tells apt-get that you're issuing a command that would normally be handled by Taskel (Without having to first install taskel.)

Fairly good explanation below.

<http://tech.shantanugoel.com/2...>

Jonathan Barronville • 6 months ago • parent

The caret means that it's a Taskel task. Check out the following link, I think it mentions that. Here is the link: <https://help.ubuntu.com/commun...>

People should NEVER uncheck anything in Taskel wich is already checked by default. If you for example uncheck Ubuntu, your complete Ubuntu OS will be removed!!!

Namaste31 • 4 months ago

I don't thank you for this article, it completely screwed up my installation afterwards !!! Now I have to reinstall ubuntu 12.04 completely !!!

I should have followed Ubuntu's website instructions, saying that taskel is not the preferred method (what an euphemism...).

Taskel install is a "forced" install, that doesn't take into account any dependancies and you can get into serious trouble because of that, I know about that.

At least I know now : I will never ever again use taskel !
